Assessment

Implement an Image Feed using the public API
https://rickandmortyapi.com/documentation/#rest

Initial page load (Screenshot -1)

- We want to show the list of episodes in left side-nav using the API **/api/episode.**
  - The episodes need to be clickable -- can be implemented as list items.
- We want to show the first page of characters using the API **/api/character.**

On selecting an episode (Screenshot-2)

- The episode should be highlighted in the left nav -- either with a dark border or a different color

- The images shown in the main view needs to be updated to the characters from the episode.

- Selecting a different episode should unhighlight the currently highlighted one and highlight the latest clicked one.

On unselecting a selected episode
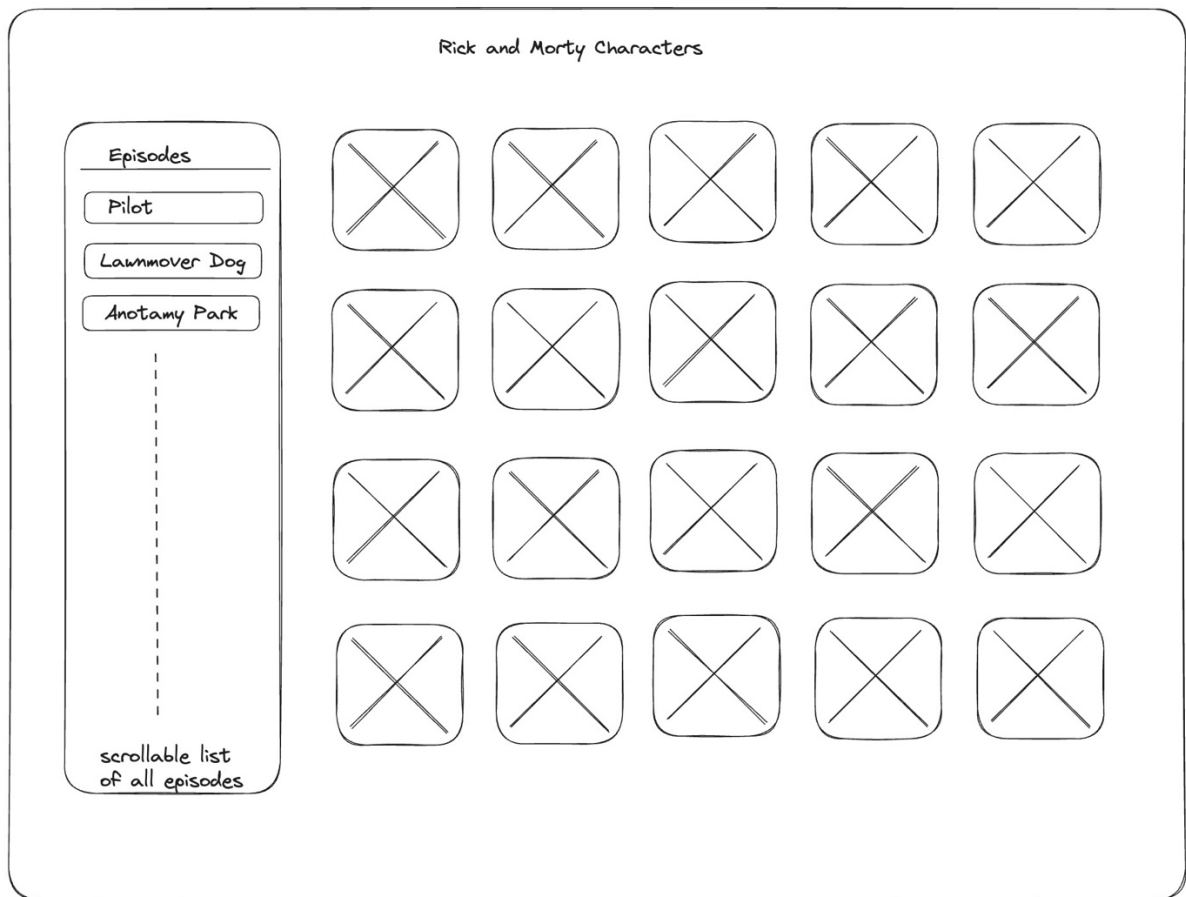

- revert to the initial page load view.

Notes:

- You can create a simple next.js app using https://nextjs.org/docs
- Use React.js and Typescript for components.
- Use your preference of styling the components.

Submitting the code for review

- **Option 1 (preferred)**: Submit a GitHub repo link with instructions to run.
- **Option 2**: Share a zip file excluding node_modules with README.md containing the instructions to run the repo.
